

## FLOORTIME FROLICS IN COMFORT WITH UNDERFLOOR HEATING

During cold winter months, or even on cool Spring and Autumn days, underfloor heating can be a welcome addition to the nursery or playroom. Used either as the main form of heating or as a supplement on exceptionally cold days, the underfloor warmth is ideal for toddlers and babies who spend time playing on the floor.

With Cosyfloor™, ECOFLOOR and ECOMAT, there is a choice of electric underfloor heating systems that suit hard surfaces such as laminate, wood, tiles or stone.

The systems are easy to install, very economical to run, are silent and unobtrusive. The size and shape of the rooms presents no fitting problem.

Photo shows: Baby sits in comfort on gently heated floor

Temperature levels can be controlled by either using either a programmable or simple on/off thermostat from R & D Marketing.

The three underfloor heating systems are perfectly safe, Cosyfloor™ and ECOFLOOR are earth screened and can be used in areas where there might be water spillage, such as laundry rooms, bathrooms and kitchens.
